[Disclaimer]

AuditBlock is not liable for any financial losses incurred due to its services. The information provided in this contract audit should not be considered financial advice. Please conduct your research to make informed decisions.

# Types of Severities

<https://t.me/AuditBlock>

## High

A high-severity issue or vulnerability means that your smart contract can be exploited. Issues on this level are critical to the smart contract's performance or functionality, and we recommend these issues be fixed before moving to a live environment.

<https://t.me/AuditBlock>

## Medium

The issues marked as medium severity usually arise because of errors and deficiencies in the smart contract code. Issues on this level could potentially bring problems, and they should still be fixed.

## Low

Low-level severity issues can cause minor impact and or are just warnings that can remain unfixed for now. It would be better to fix these issues at some point in the future.

## Informational

These are severity issues that indicate an improvement request, a general question, a cosmetic or documentation error, or a request for information. There is low-to-no impact.

<https://t.me/AuditBlock>

## Techniques and Methods

The overall quality of code.

- Use of best practices.
- Code documentation and comments match logic and expected behavior.
- Token distribution and calculations are as per the intended behavior mentioned in the whitepaper.
- implementation of ERC-20 token standards.
- Efficient use of gas.
- Code is safe from re-entrance and other vulnerabilities.

The following techniques, methods, and tools were used to review all the smart contracts.

### Structural Analysis

In this step, we have analyzed the design patterns and structure of smart contracts. A thorough check was done to ensure the smart contract is structured in a way that will not result in future problems.

### Static Analysis

Static analysis of smart contracts was done to identify contract vulnerabilities. In this step, a series of automated tools are used to test the security of smart contracts.

### Code Review / Manual Analysis

Manual analysis or review of code was done to identify new vulnerabilities or verify the vulnerabilities found during the static analysis. Contracts were completely manually analyzed, and their logic was checked and compared with the one described in the whitepaper. Besides, the results of the automated analysis were manually verified.

### Gas Consumption

In this step, we have checked the behavior of smart contracts in production. Checks were done to know how much gas gets consumed and the possibilities of optimization of code to reduce gas consumption.

### Tools and Platforms Used for Audit

Remix IDE, Truffle, Truffle Team, Solhint, Mythril, Slither, Solidity statistic analysis.

### Name

MEXTPresale

<https://t.me/AuditBlock>

### Method

Manual Review, Functional Testing, Automated Testing etc.

### Scope of Audit

The scope of this audit was to analyze the contract codebase for quality, security, and correctness.

## Smart Contract Weakness Classification (SWC) Vulnerabilities for Attacks

- ✓ Re-entrancy
- ✓ Timestamp Dependence
- ✓ Gas Limit and Loops
- ✓ Exception Disorder
- ✓ Gasless Send
- ✓ Use of tx.origin
- ✓ Compiler version not fixed
- ✓ Address hardcoded
- ✓ Divide before multiply
- ✓ Integer overflow/underflow
- ✓ Dangerous strict equalities
- ✓ Tautology or contradiction
- ✓ Missing Zero Address Validation
- ✓ Return values of low-level calls
- ✓ Revert/require functions
- ✓ Private modifier
- ✓ Using block.timestamp
- ✓ Multiple Sends
- ✓ Using SHA3
- ✓ Using suicide
- ✓ Using throw
- ✓ Using inline assembly

# Phase 1

## High Severity Issues

No issues found

## Medium Severity Issues

No issues found

## Low Severity Issues

No issues found

## Informational Severity Issues

### 1. Less internal logic found!

```
UnitTest stub | dependencies | uml | funcSigs | draw.io
contract HorseguyAi is ERC20 {
  ftrace
  constructor() ERC20("Horseguy.ai", "FOMO") {
    _mint(msg.sender, 420690000 * 10 ** decimals());
  }
}
```

#### Description

Our auditor identified that your contract has only one internal constructor that calls external functions. The contract itself does not describe its own logic.

#### Recommendation

It is important to ensure that you double-check your function's usability and how it's working with different behaviors. Should the contract itself contain logic or methods?

#### Status

#### Acknowledged

## Phase 2

Context.\_contextSuffixLength() (contracts/HorseguyAi.sol#196-198) is never used and should be removed  
Context.\_msgData() (contracts/HorseguyAi.sol#192-194) is never used and should be removed  
ERC20.\_burn(address,uint256) (contracts/HorseguyAi.sol#552-557) is never used and should be removed

Pragma version^0.8.24 (contracts/HorseguyAi.sol#10) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
Pragma version^0.8.24 (contracts/HorseguyAi.sol#175) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
Pragma version^0.8.24 (contracts/HorseguyAi.sol#206) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
Pragma version^0.8.24 (contracts/HorseguyAi.sol#288) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
Pragma version^0.8.24 (contracts/HorseguyAi.sol#316) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
Pragma version^0.8.24 (contracts/HorseguyAi.sol#633) necessitates a version too recent to be trusted.  
Consider deploying with 0.8.18.  
solc-0.8.24 is not recommended for deployment

## Closing Summary

In this report, we have considered the security of this [Horseguy.ai \(FOMO\)](https://t.me/AuditBlock) <sup>k</sup> **contract**. We performed our audit according to the procedure described above.

One issue was identified during the audit process, and their severity levels have been classified. Recommendations and best practices have also been provided to enhance code quality and security posture. The team has acknowledged all identified issues.

## Disclaimer

AuditBlock does not provide security warranties, investment advice, or endorsements of any platform. This audit does not guarantee the security or correctness of the audited smart contracts. The statements made in this document should not be interpreted as investment or legal advice. The authors are not liable for any decisions made based on the information in this document. Securing smart contracts is an ongoing process. A single audit is not sufficient. We recommend that the platform's development team implement a bug bounty program to encourage further analysis of the smart contract by other third parties
