

AuditBlock

CB30

v0. 0.8.15+commit.7dd6d404
v0.8.15

✦ Low-Risk

Low-risk code

✦ Medium-Risk

Medium-risk code

✦ High-Risk

High-risk code

[Disclaimer]

AuditBlock is not liable for any financial losses incurred due to its services. The information provided in this contract audit should not be considered financial advice. Please conduct your research to make informed decisions.

Types of Severities

High

A high-severity issue or vulnerability means that your smart contract can be exploited. Issues on this level are critical to the smart contract's performance or functionality, and we recommend these issues be fixed before moving to a live environment.

Medium

The issues marked as medium severity usually arise because of errors and deficiencies in the smart contract code. Issues on this level could potentially bring problems, and they should still be fixed.

Low

Low-level severity issues can cause minor impact and or are just warnings that can remain unfixed for now. It would be better to fix these issues at some point in the future.

Informational

These are severity issues that indicate an improvement request, a general question, a cosmetic or documentation error, or a request for information. There is low-to-no impact.

Techniques and Methods

The overall quality of code.

- Use of best practices.
- Code documentation and comments match logic and expected behavior.
- Token distribution and calculations are as per the intended behavior mentioned in the whitepaper.
- implementation of ERC-20 token standards.
- Efficient use of gas.
- Code is safe from re-entrance and other vulnerabilities.

The following techniques, methods, and tools were used to review all the smart contracts.

Structural Analysis

In this step, we have analyzed the design patterns and structure of smart contracts. A thorough check was done to ensure the smart contract is structured in a way that will not result in future problems.

Static Analysis

Static analysis of smart contracts was done to identify contract vulnerabilities. In this step, a series of automated tools are used to test the security of smart contracts.

Code Review / Manual Analysis

Manual analysis or review of code was done to identify new vulnerabilities or verify the vulnerabilities found during the static analysis. Contracts were completely manually analyzed, and their logic was checked and compared with the one described in the whitepaper. Besides, the results of the automated analysis were manually verified.

Gas Consumption

In this step, we have checked the behavior of smart contracts in production. Checks were done to know how much gas gets consumed and the possibilities of optimization of code to reduce gas consumption.

Tools and Platforms Used for Audit

Remix IDE, Truffle, Truffle Team, Solhint, Mythril, Slither, Solidity statistic analysis.

Name	CB30
Method	Manual Review, Functional Testing, Automated Testing etc.
Scope of Audit	The scope of this audit was to analyze the contract codebase for quality, security, and correctness.
Audit Team	AuditBlock

Smart Contract Weakness Classification (SWC) Vulnerabilities for Attacks

- ✗ Re-entrancy
- ✓ Timestamp Dependence
- ✓ Gas Limit and Loops
- ✓ Exception Disorder
- ✓ Gasless Send
- ✓ Use of tx.origin
- ✓ Compiler version not fixed
- ✓ Address hardcoded
- ✓ Divide before multiply
- ✓ Integer overflow/underflow
- ✓ Dangerous strict equalities
- ✓ Tautology or contradiction
- ✓ Missing Zero Address Validation
- ✗ Return values of low-level calls
- ✓ Revert/require functions
- ✓ Private modifier
- ✓ Using block.timestamp
- ✗ Multiple Sends
- ✓ Using SHA3
- ✓ Using suicide
- ✓ Using throw
- ✗ Using inline assembly

Phase 1

High Severity Issues

<https://auditblock.report>

1. Unchecked transfer (ignores return value)

```
896 | usdt.transfer(feeReceivers, fee1);
897 | usdt.transfer(feeReceivers2, fee2);

514 | usdt.transfer(msg.sender, withdrawable);
515 | uint256 bal = usdt.balanceOf(address(this));

uint beforePurchase = presaleToken.balanceOf(address(this));
presaleAddress.purchaseToken(_amount!, address(0));
uint afterPurchase = presaleToken.balanceOf(address(this));

make payable
function deposit(uint256 _amount!) external {
    usdt.transferFrom(msg.sender, address(this), _amount!);
    _deposit(msg.sender, _amount!);
    emit Deposit(msg.sender, _amount!);
}
```

Description

During the manual phase, our auditor identified several instances where methods ignored return values. Although this issue is categorized with high severity, we acknowledge that it may be part of the intended contract behavior in specific scenarios

Recommendation

It is important to ensure that you double-check your function's usability and how it's working with different behaviors. We recommend that you fix this by using Use SafeERC20, or by ensuring the transfer/transferFrom return value is checked.

Status

High

<https://auditblock.report>

<https://auditblock.report>

Medium Severity Issues

1. Reentrancy bug

⚠ 514		<code>usdt.transfer(msg.sender, withdrawable);</code>
⚠ 515		<code>uint256 bal = usdt.balanceOf(address(this));</code>
⚠ 756		<code>uint256 bal = usdt.balanceOf(address(this));</code>

Description

During the automation phase, our auditor identified several instances where methods for detecting the reentrancy bug were identified. We acknowledge that it is part of the intended contract and a high-priority issue.

Recommendation

It is important to ensure that you double-check your function's usability and how it's working with different behaviors. We recommend that you fix this to Apply the check-effects-interactions pattern.

Status

High

Low Severity Issues

No issues found

Informational Severity Issues

No issues found

Phase 2

CB30.deposit(uint256) (contracts/CB30.sol#445-449) ignores return value by
usdt.transferFrom(msg.sender,address(this),_amount) (contracts/CB30.sol#446)
CB30._buyPresale(address,uint256) (contracts/CB30.sol#460-466) ignores return value by
presaleToken.transfer(_user,totalGet) (contracts/CB30.sol#465)
CB30.withdraw() (contracts/CB30.sol#484-519) ignores return value by
usdt.transfer(msg.sender,withdrawable) (contracts/CB30.sol#514)
CB30._distributeDeposit(uint256) (contracts/CB30.sol#893-905) ignores return value by
usdt.transfer(feeReceivers,fee1) (contracts/CB30.sol#896)
CB30._distributeDeposit(uint256) (contracts/CB30.sol#893-905) ignores return value by
usdt.transfer(feeReceivers2,fee2) (contracts/CB30.sol#897)
Reference: <https://github.com/crytic/slither/wiki/Detector-Documentation#unchecked-transfer>

CB30.userInfo (contracts/CB30.sol#372) can be used in cross function reentrancies:

- CB30._callLevelNow(address) (contracts/CB30.sol#687-707)
- CB30._deposit(address,uint256) (contracts/CB30.sol#709-761)
- CB30._distributeLuckPool(uint256) (contracts/CB30.sol#840-868)
- CB30._distributeStarPool() (contracts/CB30.sol#815-838)
- CB30._distributeTopPool(uint256) (contracts/CB30.sol#870-891)
- CB30._releaseUpRewards(address,uint256) (contracts/CB30.sol#944-985)
- CB30._removeInvalidDeposit(address,uint256) (contracts/CB30.sol#643-659)
- CB30._unfreezeFundAndUpdateReward(address,uint256) (contracts/CB30.sol#763-813)
- CB30._updateLevel(address) (contracts/CB30.sol#676-685)
- CB30._updateReferInfo(address,uint256) (contracts/CB30.sol#661-674)
- CB30._updateReward(address,uint256) (contracts/CB30.sol#907-942)
- CB30._updateTeamNum(address) (contracts/CB30.sol#594-608)
- CB30.getTeamDeposit(address) (contracts/CB30.sol#556-569)
- CB30.register(address) (contracts/CB30.sol#432-443)
- CB30.userInfo (contracts/CB30.sol#372)
- CB30.withdraw() (contracts/CB30.sol#484-519)
- _updateReward(msg.sender,_amount) (contracts/CB30.sol#752)
 - userInfo[upline].totalRevenue = userInfo[upline].totalRevenue.add(reward)

(contracts/CB30.sol#934)

CB30.userInfo (contracts/CB30.sol#372) can be used in cross function reentrancies:

- CB30._callLevelNow(address) (contracts/CB30.sol#687-707)
- CB30._deposit(address,uint256) (contracts/CB30.sol#709-761)
- CB30._distributeLuckPool(uint256) (contracts/CB30.sol#840-868)
- CB30._distributeStarPool() (contracts/CB30.sol#815-838)
- CB30._distributeTopPool(uint256) (contracts/CB30.sol#870-891)
- CB30._releaseUpRewards(address,uint256) (contracts/CB30.sol#944-985)
- CB30._removeInvalidDeposit(address,uint256) (contracts/CB30.sol#643-659)
- CB30._unfreezeFundAndUpdateReward(address,uint256) (contracts/CB30.sol#763-813)
- CB30._updateLevel(address) (contracts/CB30.sol#676-685)
- CB30._updateReferInfo(address,uint256) (contracts/CB30.sol#661-674)
- CB30._updateReward(address,uint256) (contracts/CB30.sol#907-942)
- CB30._updateTeamNum(address) (contracts/CB30.sol#594-608)
- CB30.getTeamDeposit(address) (contracts/CB30.sol#556-569)
- CB30.register(address) (contracts/CB30.sol#432-443)
- CB30.userInfo (contracts/CB30.sol#372)
- CB30.withdraw() (contracts/CB30.sol#484-519)
- _releaseUpRewards(msg.sender,_amount) (contracts/CB30.sol#754)
 - userInfo[upline].totalRevenue = userInfo[upline].totalRevenue.add(level4Reward)

(contracts/CB30.sol#966) ...

- CB30.register(address) (contracts/CB30.sol#432-443)
- CB30.userInfo (contracts/CB30.sol#372)
- CB30.withdraw() (contracts/CB30.sol#484-519)

10019 - CB30

Closing Summary

In this report, we have considered the security of this **CB30 Contract**. We performed our audit according to the procedure described above.

Many issues was identified during the audit process, and their severity levels have been classified. Recommendations and best practices have also been provided to enhance code quality and security posture. The team has acknowledged all identified issues.

<https://auditblock.report>

Disclaimer

AuditBlock does not provide security warranties, investment advice, or endorsements of any platform. This audit does not guarantee the security or correctness of the audited smart contracts. The statements made in this document should not be interpreted as investment or legal advice. The authors are not liable for any decisions made based on the information in this document. Securing smart contracts is an ongoing process. A single audit is not sufficient. We recommend that the platform's development team implement a bug bounty program to encourage further analysis of the smart contract by other third parties
